

NI 43-101 Technical Report — SYNTHETIC SAMPLE

Company: Barrick-style Copper-Gold Inc. (SYNTHETIC)

Project: Reko Diq Style Porphyry Cu-Au Project

Effective date: December 31, 2024

Report date: February 14, 2025

NOTICE: This document is a synthetic, machine-generated sample created solely for software testing of automated NI 43-101 data extraction. It contains no real mineral resource information and is not a disclosure for any issuer.

1. Summary

This technical report has been prepared in accordance with National Instrument 43-101 Standards of Disclosure for Mineral Projects. All mineral resource estimates are classified in accordance with CIM Definition Standards.

14. Mineral Resource Estimates

Mineral resources for the Project are reported at a cut-off grade and are classified as Measured, Indicated and Inferred. Mineral resources that are not mineral reserves do not have demonstrated economic viability.

Category	Tonnes (Mt)	Grade (%)	Contained metal (Mlb)
Measured	210.00	0.48	2,220
Indicated	890.00	0.41	8,040
Inferred	150.00	0.33	1,090
Total	1,250.00	0.41	11,350

Table 14-1: Mineral Resources at 0.20% Cu cut-off. Grade column shows % Cu; copper equivalent (CuEq) grades are reported in Table 14-4 below and are not the headline grade.

Category	Tonnes (Mt)	Grade (% CuEq)	Contained metal (Mlb)
Indicated	890.00	0.63	8,040
Inferred	150.00	0.51	1,090

Table 14-4: Copper equivalent grades (CuEq %), for comparison only.

Mineral Reserves are reported separately in Section 15 and are not included in the mineral resource tabulation above. Capital cost and economic analysis assumptions are detailed in Sections 21 and 22.

Notes: (1) Tonnes are metric tonnes. (2) Contained metal is reported in accordance with the unit shown. (3) Totals may not sum exactly due to rounding. (4) Inferred mineral resources are considered too speculative geologically to have the economic considerations applied that would enable them to be categorized as mineral reserves.
