

NI 43-101 Technical Report — SYNTHETIC SAMPLE

Company: Pilbara-style Lithium Ltd. (SYNTHETIC)

Project: Pilgangoora Style Spodumene Project, WA

Effective date: December 31, 2024

Report date: February 14, 2025

NOTICE: This document is a synthetic, machine-generated sample created solely for software testing of automated NI 43-101 data extraction. It contains no real mineral resource information and is not a disclosure for any issuer.

1. Summary

This technical report has been prepared in accordance with National Instrument 43-101 Standards of Disclosure for Mineral Projects. All mineral resource estimates are classified in accordance with CIM Definition Standards.

14. Mineral Resource Estimates

Mineral resources for the Project are reported at a cut-off grade and are classified as Measured, Indicated and Inferred. Mineral resources that are not mineral reserves do not have demonstrated economic viability.

Category	Tonnes (Mt)	Grade (%)	Contained metal (Mt)
Indicated	108.00	1.18	—

Table 14-2: Mineral Resources — Indicated (continued on following page)

14.2 Mineral Resource Estimate (continued)

Category	Tonnes (Mt)	Grade (%)	Contained metal (Mt)
Inferred	42.50	—	—

Table 14-3: Mineral Resources — Inferred (tonnage only; grade not estimated for this domain at the current drill density).

Mineral Reserves are reported separately in Section 15 and are not included in the mineral resource tabulation above. Capital cost and economic analysis assumptions are detailed in Sections 21 and 22.

Notes: (1) Tonnes are metric tonnes. (2) Contained metal is reported in accordance with the unit shown. (3) Totals may not sum exactly due to rounding. (4) Inferred mineral resources are considered too speculative geologically to have the economic considerations applied that would enable them to be categorized as mineral reserves.
